New mammalian soluble interferon alpha-receptor forms - used for inhibiting, modulating or modifying the activities of interferon(s) Example 2; Fig 7; 46pp; English.

Novel splice-deleted interferon alpha-receptor (IFNAR) form 1 (W21805) is characterised by a new domain (S) which follows an cend-deleted extracellular domain when compared to transmembranal IFNAR (W21804). There is no transmembrana domain. The amino acid sequence is predicted from a cDNA clone (see also T73520) obtd. IFNAR clone is predicted from a cDNA clone (see also T73520) obtd. If from human myeloma U266 cells. Soluble, non-membrane bound IFNAR cplice-deleted forms 1 and 2 (see also W21806) probably regulate the response of human cells to IFNS, either by acting as IFN antagonists or by regulating the activity of the multiple IFN subtypes. They can be expressed in host cells and used to inhibit, modulate or modify the activities of IFNS alpha and beta in cells, tissues and organisms, or for diagnostic purposes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               documentation_block:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New water-soluble polypeptide(s) with affinity for IFN-alpha and beta - used to treat e.g. lupus erythematosus, Behcet's disease, aplastic anaemia, diabetes mellitus, rheumatoid arthritis, etc. Claim 2; Page 45; 52pp; French.

The transmembrane and cytoplasmic domains of the native IFN receptor have been deleted to obtain a soluble, circulating form of the receptor. Potentially immunogenic epitopes have thus been eliminated. Derivatives obtained by substitution or deletion of this sequence are also claimed as are hybrid molecules comprising the soluble receptor (or deriv.) and an immunoglobulin such as IgG1.

DNA encoding the water-soluble polypeptide with a high affinity for DNA encoding the water-soluble polypeptide with a high affinity for DNA encoding the water-soluble polypeptide with as template. For example, bacteriophage lambda ZAP, containing the entire coding sequence of the IFN-alpha and -beta receptor (030533), was incubated with oligos (330534 and 030535. RZ8496 represents the complete receptor. R28495 clacks the transmembrane and cytoplasmic domains. Both forms bind treating autoimmune diseases and graft rejection. They lack the toxic side-effects of known immunosuppressants such as steroids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Align seg 1/1 to: R28495

Compsn. of monoclonal antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Compan of monoclonal antibodies against interferon receptor useful as immuno:modulator, eg. for treating AIDS Disclosure; Fig.2A-2B; 105pp; English. A recombinant soluble form of the human interferon class I protein extracellular domain, given in R71723, was expresse either E. coli or COS cell hosts. The protein was used to immunomodulatory monoclonal antibodies.
New mammalian soluble interferon alpha-receptor forms - used for inhibiting, modulating or modifying the activities of interferon example 3; Fig 7; 46pp; English.

               New human alpha-interferon receptor protein - useful for testin interferon agonists and in treatment or diagnosis Disclosure; fig 4, 30pp; French.
This recombinant human alpha interferon (IFN) receptor protein useful for the testing of IFN agonists and for treatment and disception for the testing of IFN agonists and for treatment and disception is the testing of IFN agonists and for treatment and disception is the testing of IFN agonists and for treatment and disception is the testing of IFN agonists and for treatment and disception is the testing of IFN agonists and for treatment and disception is the testing of IFN agonists and for treatment and disception is the testing of IFN agonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (W21806) is characterised by a double deletion when compared to transmembranal IFWAR (W21804). The extracellular domain is shortened by 6 amino acid residues and is followed by a truncated intracellular domain. There is no transmembrane region. The amino acid sequence is predicted from a cDNA clone (see also .773521) obtd. from human myeloma U266 cells. Solubla, non-membrane bound IFWAR splice-deleted forms 1 (see also W21805) and 2 may regulate the response of human cells to IFNS, either by acting as IFN antagonists or by regulating IFN activities. They can be expressed in host cells and used to inhibit, modulate or modify the activities of IFNS alpha and beta in cells, tissues and organisms, or for diagnostic purposes.
                                                                                                                                                                                                                                                  W09105862-A.
                                                                                                                                                                                                                                                                                       peptide
                                                                                                                                                                                                                                                                                                                                                                 Human alpha-interferon receptor protein.
Human alpha IFN; IFN agonists; antiviral;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           201 A 201

The Abs are also useful for eg drug targetting. Variants of the protein, having residue 164 (Thr) replaced by Arg and an Asp inserted between residues 479 and 480, are also useful.

Sequence 557 AA;
                                                                              The invention covers derivatives of the interferon-alpha and/or beta receptor obtained by deleting the transmembrane and cytoplasmic domains of the native receptor or by substitution. Potentially immunogenic epitopes are eliminated and the deriv. can be secreted from transformed cells. Soluble deriv.s block the activity of IFN alpha/beta
                                                                                                                                                                                                                                                                                                                                                                              WPI;
                           and can be used to treat autoimmune diseases or rejection. See also Q14239.

                                                                                                                                       water soluble polypeptide(s) strongly bind interferon(s) alpha and beta - useful as immunosuppressants, for treating auto:immune diseases and transplant rejection claim 3; Fig 2; 58pp; English.

DNA encoding the water-soluble polypeptide with a high affinity for IFN-alpha and -beta is isolated by PCR, using appropriate oligonucleotides as primers and cloned cDNA as template. For example, bacteriophage lambda ZAP, containing the entire coding sequence of the IFN-alpha and -beta receptor (030533), was incubated with oligos 030534 and 030535. R28496 represents the complete receptor. R28495 lacks the transmembrane and cytoplasmic domains. Both forms bind the law as a search of the complete receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      17-APR-1991; WO-F00318.

Disclosure; Fig 3; 21pp; English.
Monoclonal antibodies produced against soluble forms of the human interferon alpha-beta receptor based on the full-length human IFN-R sequence are claimed. The antibodies are useful for treatment and prophylaxis of disorders involving cell proliferation and/or viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human interferon receptor.

IFN-R; extracellular domain; monoclonal antibody; viral infection; cell proliferation; allograft rejection; systemic lupus erythematosus; psoriasis; multiple sclerosis; Behcet's Disease; aplastic anaemia; immunodeficiency; measles virus; interferon-alpha-beta.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         20-APR-1994 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New mammalian soluble interferon alpha-receptor forms - used for inhibiting, modulating or modifying the activities of interferon(s) bisclosure; Fig 7: 46pp; English.

Human transmembranal interferon alpha receptor (IFNAR) (W21804) includes a 21-amino acid transmembrane region. Novel, splicedeleted IFNAR forms 1 (W21805) and 2 (W21806) have been detected that lack this transmembrane domain. These, soluble non-membrane bound polypeptides can be expressed in host cells and used to inhibit, modulate or modify the activities of interferons alpha and beta in cells, tissues and organisms, or for diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              11-MAY-1995.

                                                                                                                                                                                           protein, brx

Claim 1b; Page 58-62; 69pp; English.

Claim 1b; Page 58-62; 69pp; English.

This invention describes a novel human breast cancer gene encoding a nuclear receptor-binding auxiliary protein, brx. The brx encoded protein has anti-cancer, anti-proliferative and mitogenic activity and acts as a transcription factor and tumour suppressor. Levels of expression of Brx can be detected using the primers, probes and antibodies (contained in the kit) to determine a predisposition to breast and ovarian cancer and other proliferative disorders of immune tissues. Vectors containing the Brx gene can be used for prevention and treatment of cancers and proliferative diseases of mammalian reproductive and immune tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Driggers PH, Rubino DM, WPI; 99-254688/21. This invention describes a novel human breast cancer gene encoding a nuclear receptor-binding auxiliary protein, brx. The brx encoded protein has anti-cancer, anti-proliferative and mitogenic activity and acts as a transcription factor and tumour suppressor. Levels of expression of Brx can be detected using the primers, probes and antibodies (contained in the kit) to determine a predisposition to breast and ovarian cancer and other proliferative disorders of immune tissues. Vectors containing the Brx gene can be used for prevention and treatment of cancers and proliferative diseases of mammalian reproductive and immune tissues. Sequence 30 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       alignment_scores:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           seq_documentation_block:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cc recombinant DNA (I) of the invention. (I) comprises a sequence (S1) ce encoding the interleukin-10 (IL-10) receptor (IIIOR) and a sequence (S2) ce encoding CRFB4, both operably linked to expression control sequences. CC Cells containing (I) may be used to identify agonists/antagonist of IL-10. Agonists are potentially useful, e.g. for preventing allograft crejection, as vaccine adjuvants, for treatment of photosensitivity, inflammation, autoimmune disease and septic shock, while antagonists are potentially useful for increasing immune responses against tumours, cviruses, bacteria and parasites (especially intracellular pathogens) and CC viruses, bacteria and parasites (especially intracellular pathogens) and CC restore, e.g. by gene therapy, IL-10 sensitivity to a cell that expresses a dysfunctional II10R and is able to bind IL-10 but not to transduce a cignal. Antisense CRFB4 sequences (especially ribozymes), can inhibit CC IL-10 activity in cells. Antibodies specific for CRFB4 are used to measure and localise CRBF4, for diagnosis of defective IL-10 activity. Creamments of (I) are used as primers or probes to assay CRFB4-specific CC RNA. Agonists/antagonists may be administered parenterally, orally or rectally especially by intravenous injection or directly into a tumour or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ratio:

"Cloning and characterization of a boyine alpha interferon receptor.";

Biochim. Biophys. Acta 1173:314-319(1993).

-!- FUNCTION: RECEPTOR FOR INTERPERONS ALPHA AND BETA. BINDING TO TYPE

I IFNS TRIGGERS TYROSINE PHOSPHORYLATION OF A NUMBER OF PROTEINS

INCLUDING JAKS, TYK2, STAT PROTEINS AND IFN-R ALPHA-AND BETA-

SUBUNITS THEMSELVES.

-!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-!- SIMILARITY: BELONGS TO THE CLASS II CYTOKINE FAMILY OF RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                         CARBOHYD

Endocrinology 138:4757-4767(1997).
Endocrinology 138:4757-4767(1997).

-i- function: Receptor for interferons alpha and beta, binding to tri-
-i- function: Treceptor for interferon of a number of proteins
INCLUDING JAKS, TYK2, STAT PROTEINS AND IFN-R ALPHA-AND BETA-
SUBUNITS THEMSELVES.
SUBUNITS TEMPERANCE T MEMBRANE PROTEIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ovis aries (Sheep).
